

B+ Tree User Manual

CSCI 331

Team 3

a.) Program name: main.cpp

b.) What is the program supposed to do?:

The program is given a file of sorted record keys and puts it through an algorithm that makes a B+ tree out of the keys. This program will also go through with adding and deleting keys from the tree. Otherwise the user can chose not to use a file and start with an empty tree that will either have keys of type integer or string.

c.) location of the program:

/export/home/cs331/cs331128/Desktop/331/project3

flags:

-i <FILENAME>	integers with file
-s <FILENAME>	strings with file
-i	empty tree with integer keys
-s	empty tree with string keys

d.) makefile:

```
CXX = g++
CXXFLAGS = -std=c++x0
main: main.cpp bPTree.h node.h Queue.h shared.h
$(CXX) $(CXXFLAGS)-o main main.o
```

e.)test run:

-----HELP MENU-----

-i <FILENAME>	integers with file
-s <FILENAME>	strings with file

-i empty tree with integer keys
-s empty tree with string keys

END HELP FLAG TEST
END HELP FLAG TEST
END HELP FLAG TEST
END HELP FLAG TEST

Enter the number of values per block:
6Number of values per block have been set to: 6
The B+ tree has been created.

What would you like to do?

1. Add record
 2. Delete record
 3. Show tree
 4. List values
 5. Quit the program
